

Sehr geehrte Damen und Herren,

we can look back on a successful 2023 with the UAR group. With an operating performance of EUR 139 million the Members of the UAR Innovation Network carried out around 1,100 research projects in cooperation with science and industry during the past year. At the 10 associated companies of UAR approximately 1,100 employees work on future technologies with a main focus on efficient production. This continuing success is attributable to the dedication and expert knowledge of the researchers.

A working environment that encourages innovation must offer the conditions necessary for this – and these include promoting a healthy work-life balance. After LCM, SAL and Wood K plus, the research centre RECENDT has now been awarded the Austrian mark of quality “familieundberuf” (“family and job”). This certificate identifies the research centres as family-friendly employers.

Discover Research Live!

“Have a go. Be amazed. Explore.” That’s the motto for the Long Night of Research 2024 on 24 May 2024. In 10 regions in Upper Austria around 140 institutions – primarily universities, research centres and innovative companies – offer a wide range of activities for young and old. Save the date! There will be loads to discover. The full programme will be available online at www.langenachtforschung.at from the end of April.

Best wishes,
DI Dr. Wilfried Enzenhofer, MBA

RECENDT

MARK OF QUALITY FOR WORK-LIFE BALANCE

At the start of the year, RECENDT became the proud recipient of the Austrian government’s “familieundberuf” (“family and job”) certificate. This recognition of the company’s efforts to promote a healthy work-life balance was presented by Minister for Family Affairs Susanne Raab at a ceremony in Vienna. The award came

after successful completion of the certification process, and RECENTD can now officially describe itself as a family-friendly company.

SCCH

NEW APP REMOVES FEAR FROM LEARNING MATHS

The Infangers, husband-and-wife teachers in Upper Austria's Innviertel, have developed an app called "MatheArena" to take away children's fear of learning maths. In cooperation with Veritas, publishers of school textbooks, the app is now being used in classrooms. Software Competence Center Hagenberg did further scientific work on developing the adaptive algorithm necessary for assessing the degree of difficulty of the maths problems.

LKR

DIGITALIZATION AS A MOTOR FOR METALLURGY

Over the coming years, a varied consortium of partners from science and industry led by LKR will be working on the COMET project "ProMeTheus" to conduct research on combining metallurgy and digitalization. The project is expected to lead to a considerable increase in efficiency and the creation of new manufacturing opportunities.
